

IN THE CLAIMS:

Please cancel claims 2-58 without prejudice.

1. (original) A micro-porous mesh structure for supporting a wall of a body passage, comprising:

a generally tubular body having a contracted condition for facilitating delivery into the body passage, and an enlarged condition for engaging the wall of the body passage, the tubular body being biased to its enlarged condition; and

a plurality of openings in the tubular body defining a micro-porous mesh pattern therein.

2 - 58. (Cancelled)
